

Disclaimer: Teams are expected to construct their own models from various designs, plans or kits. Kits offered on any of the links listed on the SO website are not sponsored or endorsed by Science Olympiad and have not been approved to meet SO competition specifications. Teams should not expect kit manufacturers or free plans to produce the winning solution to the problem. Kits are listed as one possible learning tool for students to help master the techniques of building, trimming, and flying indoor free flight aircraft before students modify design plans or design their own models to meet the current SO rules specifications. Kits simply function as tools of learning for novice competitors and it is up to teams to create their solutions from the many resources, information and tools available. Some good designs that could be modified are offered free on soinc.org.
