

Amazing Mechatronics Division C 2018 Trial Event Rules
North Carolina Science Olympiad

1. **DESCRIPTION:** Teams of students will develop a deep fundamental understanding of mechatronics, which is a multidisciplinary field of engineering at the intersection of mechanical engineering, electrical engineering and programming. On the day of the event, teams will demonstrate their knowledge and understanding of mechatronics by debugging and fixing applications on Arduinos and using laptop Arduino IDEs to program certain tasks.

A TEAM OF UP TO: 2 **EYE PROTECTION:** None **APPROXIMATE TIME:** 50 minutes

2. **EVENT PARAMETERS:**
 - a. Teams must bring a writing instrument. Teams may also bring two 8.5" x 11" sheets of paper, which may contain only hand-written information on both sides of each sheet from any source.
 - b. Event supervisors will provide all Arduinos, breadboards, LED lights, and other objects needed for stations, as well as laptops with the Arduino IDE already installed.
 - c. Participants are asked to bring their Arduinos and LEDs as backup for the event.

3. **THE COMPETITION:**

This event will have two parts.

Part 1: Troubleshooting Arduino Microcontrollers

- a. The competition will focus on teams evaluating and troubleshooting Arduino microcontrollers in a series of stations or a sit-down test.
- b. Suggested time is 25 minutes.
- c. Teams will be given a robot or microcontroller that does not work as intended.
 - i. Teams will have to troubleshoot the problem(s) and provide a solution in a given amount of time.
 - ii. The solutions can be both hardware software and hardware in nature.
 - iii. Teams must NOT change any of the hardware or code at the station. Altering the hardware or code in any way will result in disqualification of the team.
- d. The competition must consist of troubleshooting from each of the following areas:
 - i. Basic Arduino Microcontroller
 - ii. Basic digital components (LEDS, Resistors, & Potentiometer)
 - iii. Basic sensors (Touch, Photo resistor, or Flex)
 - iv. Basic programming with the Arduino Language (text-based language based on C)
 - v. Basic programming fundamentals including sequence, loops and Boolean logic

Part 2: Create A Mechatronic Whatchamacallit

- a. Suggested time is 25 minutes
- b. Teams will be presented with a list of possible programming projects.
- c. Teams will complete as many projects in the allotted time as is possible.
- d. The projects will cover the same range of topics outlined in 3.d.i.-v.

4. **SCORING:**

- a. The score on Part 1 and Part 2 will each count for 50% of the total test score.
- b. Points will be awarded for correct answers.
- c. Ties will be broken first by the better score on Part 2, then by predetermined questions from Part 1.
