

BOOMILEVER

Sample Boomilever & Testing Wall Diagram Side View – 2020

The Boomilever must be a single structure, with no separate or detachable pieces, constructed of wood, and bonded by adhesive (3.a.)

The Boomilever pictured here is only one possible configuration that satisfies rules.

Mounting Hook is secured with a hex nut and flat washer on the front side and a wing nut and flat washer on the back side of the Testing Wall (5.a.iii.)
