To illustrate smaller details, this diagram is not drawn to scale.

**Target Point** marked on tape approximately 5.0 cm by 2.5 cm (6.c.)

**Target Distance** from the Start Point to the Target Point is between 2.00 m and 5.00 m, in intervals of 0.50 m for Regionals, 0.25 m for States, and 0.05 m for Nationals (6.c.)

**Imaginary center line** connecting the Start Point and the Target Point (6.b.)

**Single ⅜” hardwood round dowel** that extends at least 0.50 m on either side of the Start Point is placed 1.00 m from the Start Line, is perpendicular to the imaginary center line, and is securely taped and/or weighed down at its ends (6.d.)

**Start Point** is marked on tape approximately 2.5 cm wide on the edge (the **Start Line**) closest to the Target Point; the tape extends at least 0.50 m on either side of the Start Point and is perpendicular to the imaginary center line (6.b.)
